

IN THE CLAIMS:

A complete listing of the pending claims follows:

1 -35. (cancelled).

36. (previously presented) A method of revoking a host device, comprising:

receiving at a storage engine a certificate from the host device, the certificate containing a digital signature;

authenticating the digital signature;

receiving at the storage engine a file request from the host device, the file request being directed to a file stored on a storage medium accessible to the storage engine;

reading a revocation file associated with the file from the storage medium, the revocation file containing at least one rule, the at least one rule associating data in the revocation file with data in certificate;

applying the at least one rule on the data in the revocation file and the associated data in the certificate; and

if the application of the at least one rule provides a failing result, denying the file request.

37. (previously presented) The method of claim 36, wherein the at least one rule comprises a plurality of rules.

38. (previously presented) The method of claim 36, wherein the storage medium is an optical disk.

39. (previously presented) The method of claim 36, wherein the application of the at least one rule act comprises matching the data in the revocation file with the data in the certificate.

40. (currently amended) The method of claim 36, further comprising: if the application of the at least one rule provides a successful successful result, granting the file request.

41. (cancelled)

42. (new) A storage engine, comprising:

authentication means for authenticating a digital signature contained in a certificate from a host device, and

file request response means for responding to file requests from the host device, each file request identifying a particular file, the file request response means being responsive to file requests only if the authentication means authenticates the digital signature, the file request response means being configured to read a revocation file associated with the particular file identified by the file request, the revocation file containing at least one rule, the at least one rule associating data in the revocation file with data in certificate, the file request response means being configured to apply the at least one rule on the data in the revocation file and the associated data in the certificate; the file request response means being configured to deny the file request if the application of the at least one rule provides a failing response.

43. (new) The storage engine of claim 40, wherein the application of the at least one rule comprises matching the data in the revocation file with the data in the certificate
